

1. Login & Register Screen

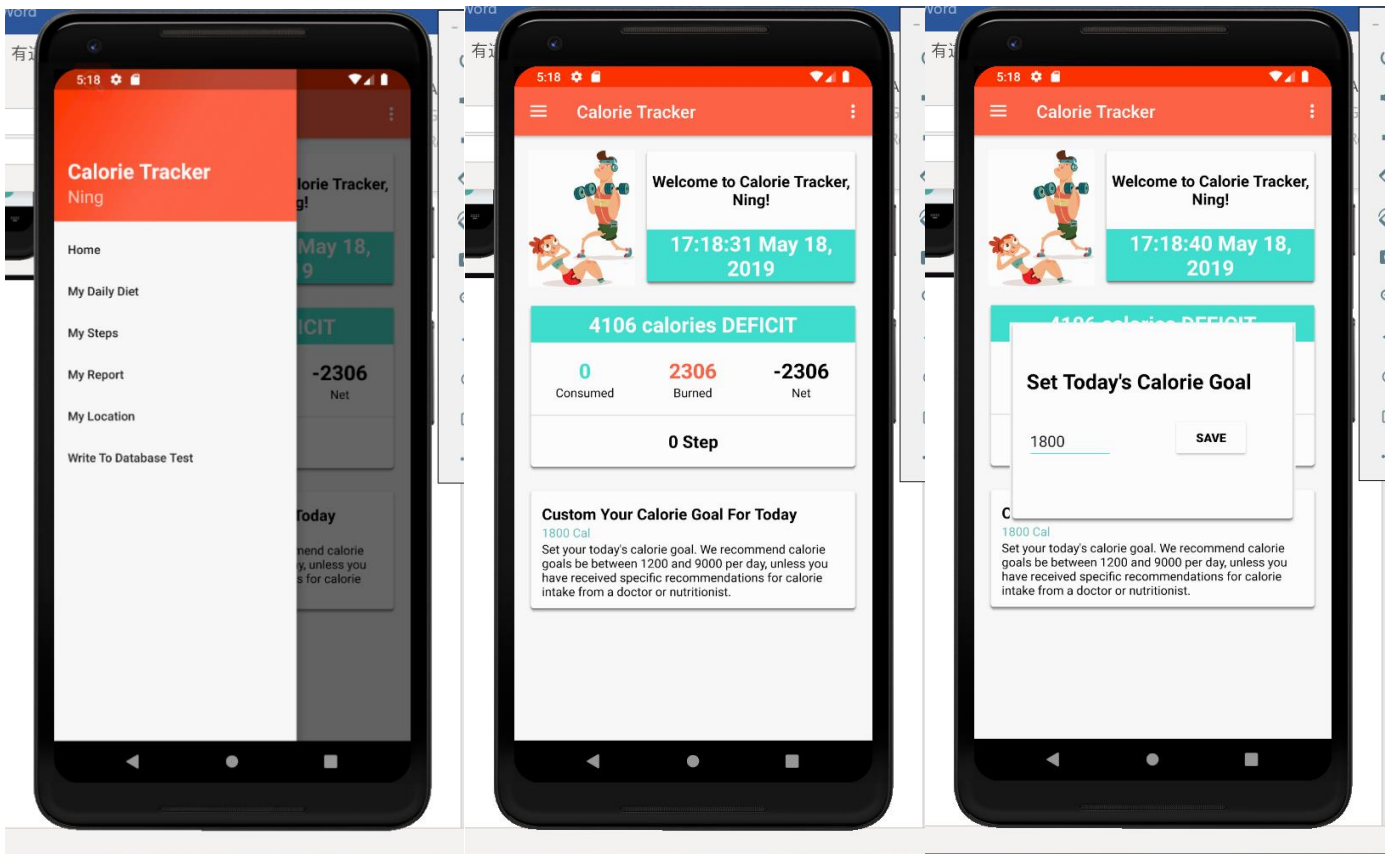

The app allows you to register a new account or login an existing account. Username and email must be unique. All your personal data will be associated with your account.

2.Home Screen

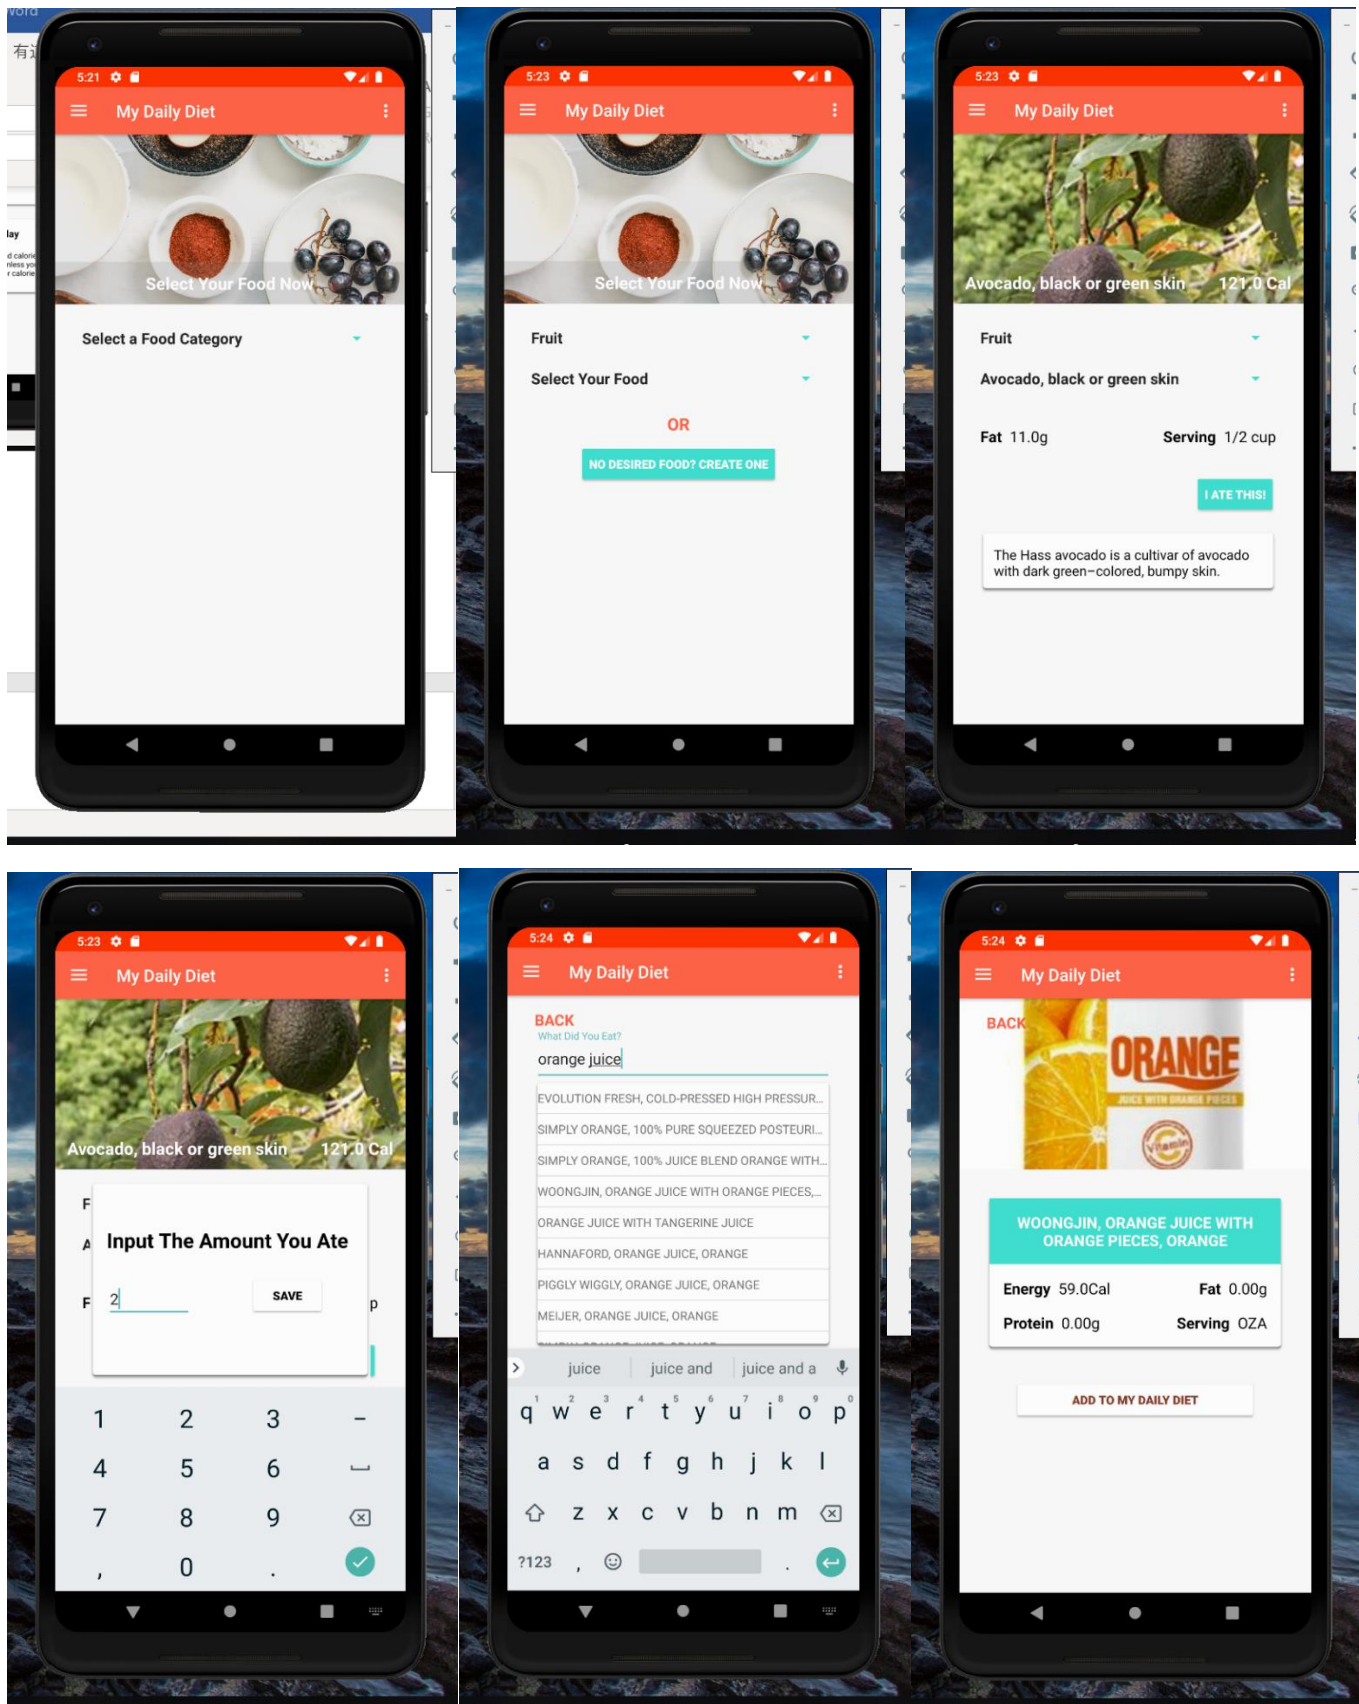

On home screen, you can set up your daily calorie goal. The steps you have taken, as well as calories consumed, burned, and the difference compared with your calorie goal are displayed on this screen.

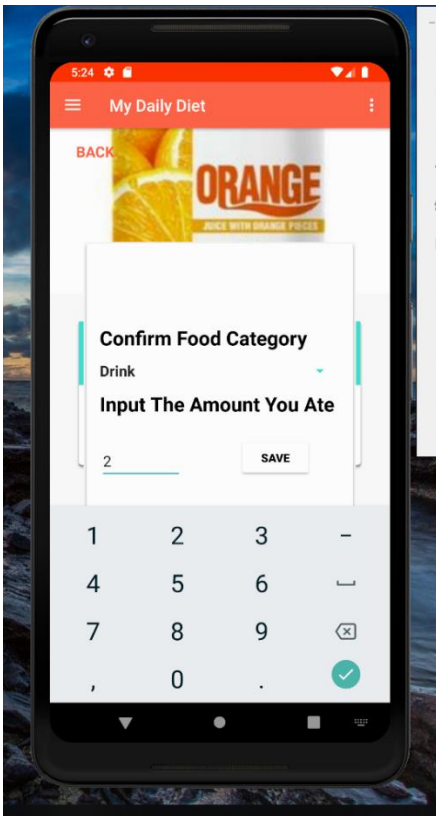

3. My Daily Diet Screen

You can select a food you consumed and add it to your consumption history. The nutrition data of this food along with its description will be displayed on the screen.

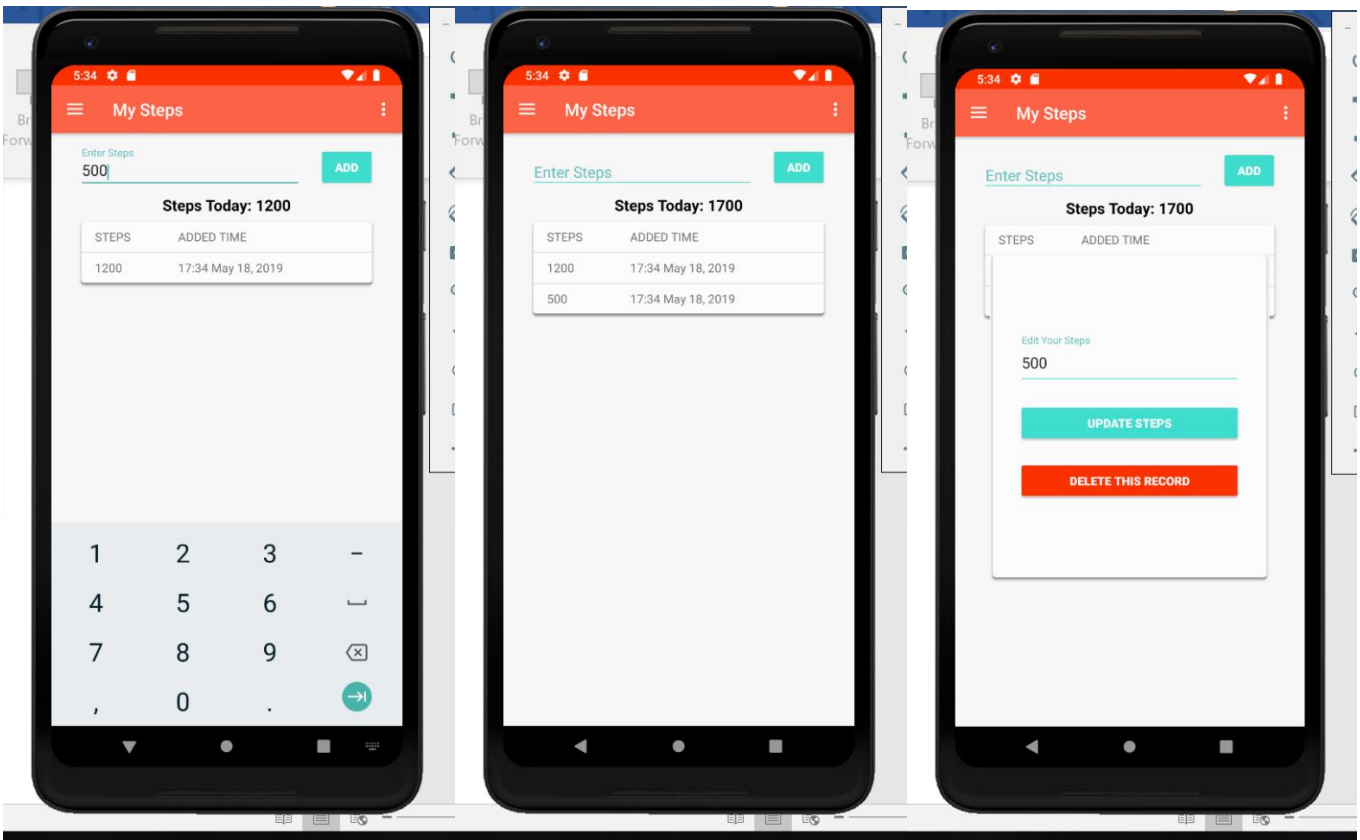

If your food is not included in the database, you can manually search the food name and add it to your consumption history. E.g. Search for “orange juice” and select one from the pop-up list.

4. My Steps Screen

You can add, check, update, and delete the steps you took on this screen.

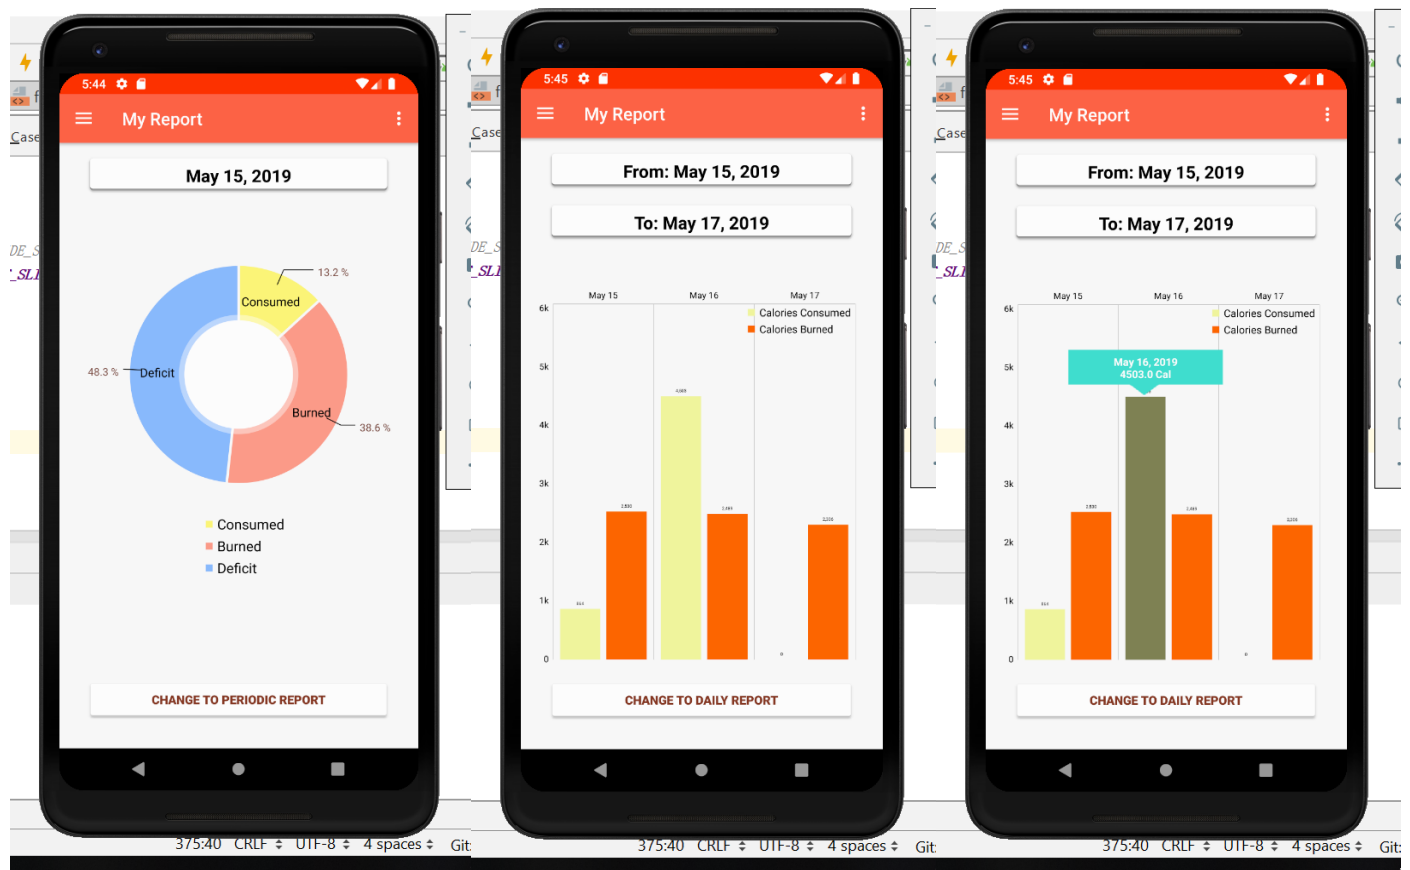

5. Calorie Tracker Screen

This screen was included in the Home Screen.

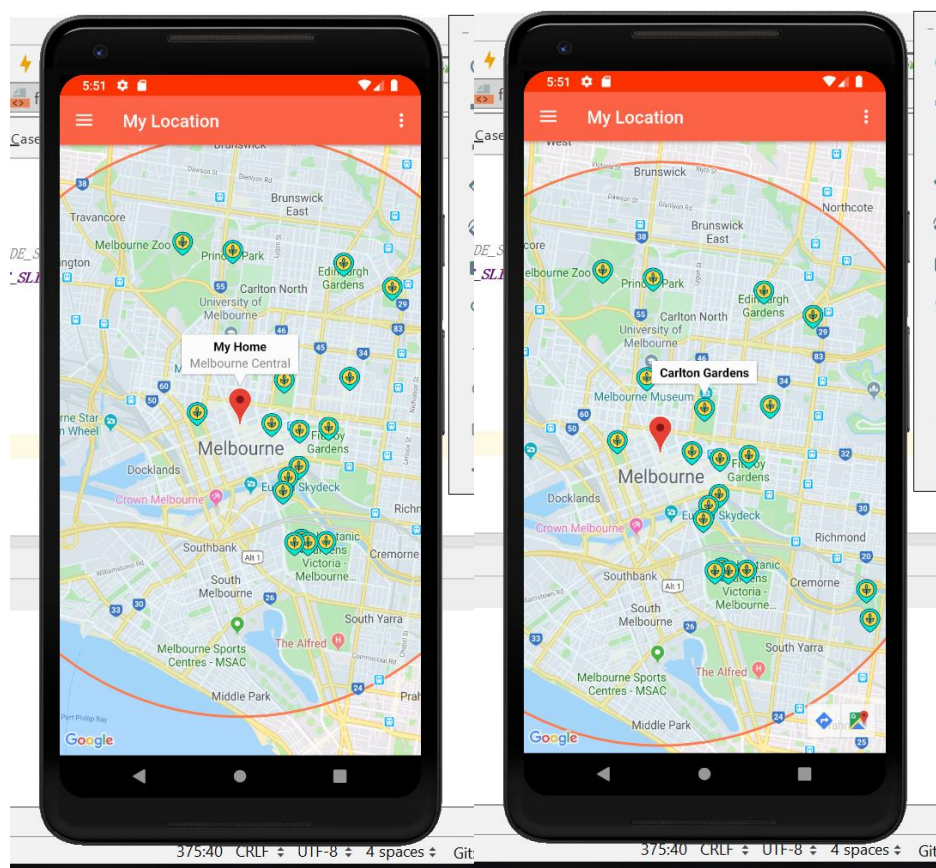

6. Report Screen

You can check your daily report in a pie chart by specifying a date. You can also check your periodic report by specifying a time period.

7. Map Screen

Based on your location, the app will show all the parks around you within 5 kilometers radius.

8. Write to Database Test Screen

This is for test only. A user's data (steps, etc.) will be stored locally on the phone. At 23:59 on each day, the data will be pushed to the server and deleted locally. By clicking the red button, this task will be immediately executed.
